

SAMARTH NIMANGRE

SYSTEMS & AUTOMATION OPERATOR • INFRASTRUCTURE ENGINEER

Karnataka, India • samarthknimangre@gmail.com • +91 6361209256

Portfolio: sam-codes.vercel.app • GitHub: github.com/Sam-CodesAI • Telegram: @Samarth1306

PROFESSIONAL SUMMARY

Proactive Systems & Automation Operator with deep hands-on expertise in building and maintaining resilient web scrapers, lead enrichment engines, and cloud databases. High-autonomy engineer specializing in preventative infrastructure monitoring, leveraging modern AI tooling (Claude Code, Cursor, Codex) to troubleshoot breakages, patch APIs, and refactor scripts on the fly. Experienced in managing Supabase PostgreSQL, Apollo lead generation, and serverless workflows with zero downtime.

CORE TECHNICAL COMPETENCIES

Automation & Lead Gen:	Apollo API, Web Scraping (Puppeteer/Playwright/Cheerio), Lead Enrichment, Google Sheets CRM API
Infrastructure & DB:	Supabase PostgreSQL (RLS, Migrations, Indexing), Docker, Vercel Edge, Redis/KV, Linux/Bash
AI Coding & Patching:	Claude Code, Cursor, OpenAI Codex, Google Gemini AI (Structured JSON Extraction, Model Cascading)
Languages & Stacks:	TypeScript / JavaScript (Node.js, Next.js 16, React 19), Python (Asyncio, NumPy, Pandas), SQL

PRODUCTION SYSTEMS & INFRASTRUCTURE EXPERIENCE

SAM CODES — Personal Platform & Administrative Command Center

Live Production: sam-codes.vercel.app

- Architected full-scale Next.js 16 administrative hub managing lead intake, inquiry workflows, telemetry diagnostics, and database health.
- Hardened PostgreSQL database across 14 tables using Row-Level Security (RLS), composite B-tree indexes, and automated SHA-256 JSON backups.
- Built sliding-window IP rate limiter and edge Web Crypto HMAC-SHA256 session verification preventing unauthorized access and API floods.

Teleflow Agent — Autonomous Conversational Lead Qualification & CRM Router

GitHub: Sam-CodesAI/teleflow-agent

- Engineered 24/7 serverless Telegram qualification agent (@samarth_master_bot) achieving sub-300ms turn latency on serverless edge.
- Implemented deterministic 4-phase state machine with Google Gemini fallback cascade to extract qualified budgets (INR/USD) without hallucinations.
- Deployed high-reliability webhook ingestion with 200 OK fast-acknowledgment to eliminate Telegram retry storm cascades.

Automated Lead Generation, Scrapers & Multi-Channel Outreach Pipelines

Production Pipelines

- Built and maintained B2B scraping pipelines integrating Apollo search queries, Google Sheets OAuth 2.0 sync, and multi-channel notification bots.
- Monitored scraper uptime, proxy rotations, and DOM/API schema shifts; patched breakages proactively before downstream lead flow was affected.
- Utilized Claude Code and Cursor CLI for high-velocity maintenance scripting, automated lint verification, and rapid diagnostic loops.

EDUCATION & WORK LOGISTICS

- Background:** Pre-University / High School (Science, Mathematics & Computer Science) | Karnataka, India
- Work Availability:** 15–30 hours/week, highly autonomous asynchronous communication, rapid response during overlapping US/EU business hours.
